Automated External Defibrillator (AED) and Upgrade

The project scope includes the installation of Automated External Defibrillators (AEDs) throughout the terminal and parking decks to enhance safety for passengers and employees. The AED Retrofit and Upgrade project will standardize signage, locations, and AED types deployed over the Airport campus. The goal is to make wall-mounted (Pedestal, Semi-Recessed and Surface Mount) AEDs more visible and accessible to passengers, employees, and first responders during medical emergencies. It includes replacing cabinets as needed, adding new cabinets through ongoing and future terminal projects, and installing cabinets in the existing parking decks.
