Charlotte Water / Architectural / Engineering Services

Hydraulic Modeling and Baseline Capacity Analysis Update for the Capacity Assurance Program

Charlotte Water (CLTWater) is soliciting Statements of Qualifications (SOQ) from qualified engineering firms (ENGINEER) for Hydraulic Modeling and Baseline Capacity Analysis Update Services. These services are to be comprised of hydraulic modeling, and determining new baseline capacities for select sewer basins, for use in the Capacity Assurance Program, as needed, for sewer systems located throughout the Charlotte Water service area. These services will also include studies to evaluate the wastewater collection system sub-basin for existing and future capacity needs. Hydrologic and hydraulic analyses will be performed for designated sewer basins using Charlotte Water's current Infoworks collection system base model.
