Solid Waste Services Master Plan - Advance Planning

The project is a study of the current City of Charlotte Solid Waste collection process, the existing facilities for the processing of solid waste, and future needs that include providing strategic locations for additional facilities. The consultant needs to be able to make recommendations as well as have the resources to design a facility. The selected firm will review the Solid Waste collection process and develop a master plan for how services should be provided throughout the City of Charlotte. This will include identifying possible locations for facilities, the make-up of facilities, and co-location opportunities with other new or existing City facilities.
