Charlotte Department of Transportation / General Services

Trip Hazard Removal Services

The City of Charlotte vendor will provide Services that consist of the removal of concrete tripping hazards from sidewalks, curb ramps, and concrete curbing in the City of Charlotte's sidewalk system that the City or its agents have identified. The identified concrete tripping hazards will be repaired without use of typical destructive construction methods, i.e. panel demolition and replacement. All work produced shall be compliant with the Public Right-of-Way Accessibility Guidelines (PROWAG) requirements for slope and Occupational Safety and Health Administration requirements for traction. Tripping hazards are defined as any change in vertical elevation more than 1/4". The vendor is responsible for all traffic control in accordance with the most recent Work Area Traffic Control Handbook ("WATCH"), which can be found at <https://charlottenc.gov/Transportation/Permits/Pages/RightofWayUse.aspx> Any debris resulting from the removal of trip hazards shall be disposed of in a legal manner. While the City is flexible with respect to certain elements of the Citywide Trip Hazard Removal Services, the City has specific requirements and preferences for the Service delivery method. The City of Charlotte vendor shall identify and repair the trip and fall hazards that are ¼" to 2 ½" in height in the City of Charlotte's sidewalk system. The City of Charlotte vendor shall repair hazards greater than 2 ½" where the thickness of the concrete is greater than 4".
